Assignment # 9

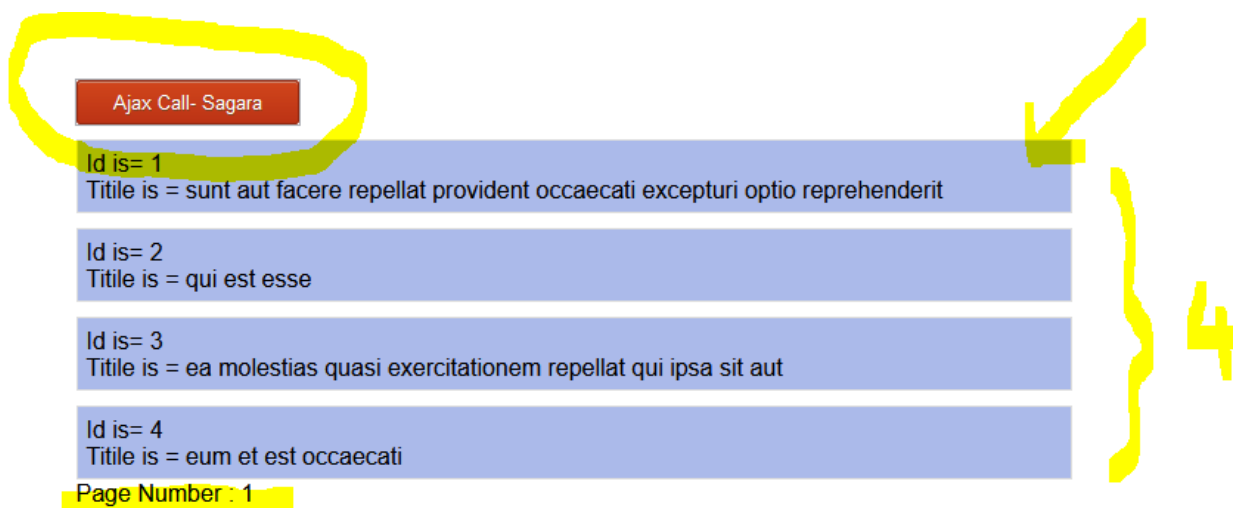

---

## 1. Ajax /JSON

Watch the video I have uploaded to moodle

Customize the sample code to include the following changes

- Change the appearance of the button with CSS
- Include the Page Number as shown below
- It should fetch 4 records only in one click
- Customize the display are
- Any other changes that you think is useful
- Explain in your own words how this Ajax call work

### **Guideline:**

1. Create a JavaScript/jQuery/Ajax code to achieve the above functionality.
2. You are free to use your own styling/content . (i.e., colors, fonts, content)
- 3. *Explain the How Ajax works***
4. Try your best to make your code unique
5. Show all the screen shots in word format
6. Additional improvements will be given extra marks (Include in your word document if you have done any improvements to the program)
7. Create a folder **<YourStudentNo\_Assn9>**. Copy all the related files to that folder including word document. Now make a zip file and upload to Moodle before the deadline.

**Late assignments will not be accepted or marked!**

Copied assignments will be marked as 0 for all the parties involved
