

Assignment Submission Guidelines

Before submitting each assignment in the Frontend Software Development II class, follow these guidelines to ensure a smooth and efficient submission process:

1. Code Testing and Functionality:

- Thoroughly test your code to ensure that all features and functionalities are working as intended.
- Verify that your Graphical User Interface (GUI) functions properly, and users can navigate through your web page without the need for the console.

2. Optional: Submission Report (PDF):

- Consider creating a report in PDF format. Include screenshots that provide evidence of your code's functionality. This can serve as a helpful reference for both you and the instructor during the evaluation process.

3. Code Comments with Student Number:

- In each code file, include a comment at the beginning or relevant sections with your student number. This ensures easy identification of your work and helps in maintaining academic integrity.

4. Zip File Creation:

- Create a zip file containing all the necessary files for the assignment. This should include:
 - HTML, CSS, JavaScript, and any other source code files.
 - Image files, if used in your project.
 - Optional: Your PDF report showcasing code functionality.
- Ensure that the zip file is appropriately named, indicating the assignment number and your student number for clarity (e.g., "Assignment2_Student12345.zip").

5. Single Submission:

- Submit only one zip file per assignment. Consolidating all files into a single submission simplifies the grading process and avoids potential confusion.

6. Good Luck!

- We wish you the best in completing your assignments. If you encounter any issues or have questions, feel free to reach out to the instructor or teaching assistant for assistance.
