

Database Programming:

Practical Exercise #3

Term: **2024W**

Student Name:

Student Number:

Create your own table. Table Name should be → **[TableName]_YYY** (YYY is last 3 digits of your student number)

Write PL/SQL Program(s) to demonstrate the following PL/SQL concepts

Explain the concepts with examples

1. Explicit Cursor
2. Implicit Cursor
3. Cursor Attributes **%ROWCOUNT , %FOUND %NOTFOUND and %OPEN**

Guideline

Cursor name should include your first name

Explain each of the above PL/SQL constructs with example :

Do not use any tables that we used in our class labs. Rename each table with your student number

Screen shots must be clear and complete

code block must be visible (connection name / login name)

Explain the code block in your own words

Copied or AI generated answers will get 0 marks
