Introduction

JavaScript is a cross-platform, object-oriented scripting language. It is a small and lightweight language. Inside a host environment (for example, a web browser), JavaScript can be connected to the objects of its environment to provide programmatic control over them.

JavaScript contains a standard library of objects, such as Array, Date, and Math, and a core set of language elements such as operators, control structures, and statements. Core JavaScript can be extended for a variety of purposes by supplementing it with additional objects; for example:

- Client-side JavaScript extends the core language by supplying

Project documentation page

This will require some knowledge of HTML CSS and bootstrap or JavaScript. The basic idea is: when you click on any topic on the left, it loads that content on the right.

Screenshot of google.com

Yes, you have seen it many times. But can you replicate it. The simple google.com page with icons, google's logo, a text box and two buttons. You can make a look-alike of google.com page. In this project you are making it look like google.com not function like google.com.

You need to know both HTML and CSS.
